

Make your own periscope at home and you'll be able to look up into the trees!

Step One
 Make a box by dividing a sheet of card into four with a tab to stick it together. Cut two viewing holes as shown.

Step Two
 Fix two pocket mirrors into the box using sticky tape, they must be at 45 degrees and so that you can see them through the holes

Step Three
 Hang your periscope into the trees using cable ties or just take it around with you to look into lots of things!

You could also use a milk carton for a really easy box!

And customise the box with bicycle handle grips

Be careful of sharp edges on the card and mirrors and remember if you're making this at home and using scissors to get an adult to help you!
